

BBW Lasertechnik celebrates its 25th anniversary

Prutting, Germany 12/5/2022 – German production specialist BBW Lasertechnik celebrates its 25th anniversary this year. Since starting in 1997 with its first laser system, BBW Lasertechnik is now a leading company in Germany for innovative laser material processing, specialising in the core areas of laser welding, precision laser cutting, laser drilling and laser ablation.

The first contract: precision laser cutting of medical devices

The history of BBW Lasertechnik began in 1997 in a space of just 40 m² with a self-built laser system. With this system, stents (small medical implants for blood vessels) were cut for the company's very first customer. Since this first order, more and more customers have relied on the company for precision laser cutting of medical devices.

Innovative laser material processing on the cutting edge

Today, BBW Lasertechnik has a 10,000 m² production space in Prutting near Rosenheim, Germany; over 180 employees; and 45 laser systems. What makes the company so unique is its wide range of services. As well as its core areas of laser welding, precision laser cutting, laser drilling and laser ablation, the company also offers mechanical manufacturing processes with the most modern lathes and milling and bending machines, and assembly services. In addition, custom-made fixtures and machines are developed in the company's in-house construction department. BBW Lasertechnik is able to assemble components modularly, thus offering fast, cost-efficient solutions. This allows even customers with demanding orders to be served from initial concept to series production, and complete assemblies can be made a reality. In order to continue to develop, BBW Lasertechnik also has its own research and development department that keeps a close eye on trends and carries out research projects with universities and (international) partners. Customers come from sectors such as the automotive industry, the electronics industry, air conditioning and energy technologies, the aerospace industry, and machinery and construction.

Our team: the key to our success

According to management, the reason behind this family-run company's strong market position is its solid team: "The key to our success is clearly our staff. We are incredibly proud of what we have achieved together over the past 25 years," explains Hans Bürger, co-founder of BBW Lasertechnik, who today runs the company with his son, Andreas Bürger. Andreas adds: "The laser is the tool of the 21st century and the significance of laser-based manufacturing technologies will continue to increase. This means there will always be new opportunities for us that we want to seize." BBW Lasertechnik considers itself well-prepared for the challenges of the coming years.
